PROJECT REM Limited (trading as Fishbone Solutions)

SME I Derby

**Industry:** engineering consultancy as a service to the transportation sectors (rail, automotive and aviation).

---

**Project Outcomes**

The KTP has directly enabled the business to add a new product – the FISH (Fishbone Information Services Hub) – which is a completely new service and product line. Alongside the Company’s existing engineering consultancy, the business is now able to promote and sell a software product, not only to its existing market segments but potentially to other industries and sectors including and not limited to Aerospace, Defence and Maritime.

The KTP also provides Fishbone with the strategy to explore other markets and sectors because the software tool developed on the KTP was designed to be agnostic (from a data point of view) meaning it is transferable and saleable into almost any market or sector where fixed and moving assets generating data from IoT and instrumentation require a data analytics engine and dashboard.

The KTP fundamentally accelerated the company and staff’s capabilities in two key areas: Software Product development and Data Analytics as a Service.

---
